

*Fall Protection, Confined Space, & Rescue Solutions*

## **PPE COMPETENT INSPECTION COURSE**

This 2-day course will cover all aspects of care, maintenance, and inspection of personal protective equipment. Participants will be taught practical techniques and procedures required to conduct thorough examinations, produce inspection reports, and specify corrective action when needed. Considerations for creating a management system for tracking life safety equipment will also be covered. The last portion of this course will include both a written and practical exam. Students who pass the exam will receive a ppe inspection – competent person certification.

### Workshop Features and Benefits:

- Modern classroom and training facility
- Programs delivered by top product specialists – Industry leading trainers and field experts
- Static and dynamic equipment testing capability
- Familiarization of manufacturing processes and quality controls
- Use of top-of-the-line equipment
- Comprehensive reference materials

Introduction: These training sessions are designed specifically for safety officers, issuers of safety equipment, supervisors, specialized trainers, safety specialists and work-at-height and rescue consultants seeking greater knowledge on equipment performance and rope-based system solutions. Outlined has been developed to meet CSA and all the major manufactures guidelines for inspection and tracking of the inspections. Students will be provided with extensive manufacture documentation to assist them on their inspections after the successful completion of the training. The goal of this workshop is for clients to be able to inspect fall protection, confined space and rescue equipment onsite with minimal down time and budget savings. Students will access solutions through interactive knowledge sharing and hands-on training.

### **Length of Training**

16hr (2 Day)
